# Asset Tracking

Know Where Your Assets Are At All Times!

An RFID system is an integration of RFID readers, paired tags and software designed to meet the need of a business or industry. RFID systems offer a number of benefits including saving time and money, increasing productivity, securing and tracking important assets and much more.

RFID Saudi Asset Tracking System provides you with an automated tag and track process that results in the ability to conduct real-time audits and have an extremely clear grasp of your asset utilization

Main Features are the following:
- Asset Movements
- Asset Inventory
- Asset Movements Notification (Popup, Email)
- Asset Monitoring (Determine which assets are inside and outside)
- User and Role Management (Manage what pages can only accessed by a certain user depends on the role that will be assigned to them)

RFID Saudi

Additional Features are the following:
- Different Reports (Asset, Tag, Movements, Handheld Reports)
- Overflow Alert (There will be an alert if a certain location exceed the capacity declared in it)
- Department and Category Management
- Customizable Columns in reports (The user can hide / add columns in all report pages depends on their analysis requirements)
